

# Leading Global Pharmaceutical Organization Saves \$1 Million Using TransPerfect's Global Regulatory Translation Automation Solution

TransPerfect Life Sciences

## THE CHALLENGE

A leading pharmaceutical client was struggling to efficiently manage their decentralized translation process and it was causing issues with translation quality, project deadlines, and their visibility into spend and project metrics.

They sought a partnership that would help implement an efficient and scalable global strategy that would help them save time and resources.

## THE SOLUTION

TransPerfect designed a customized solution for centralizing all regulatory affairs global translations.

This was powered through a direct integration between Veeva's RIM and GlobalLink to help reduce project management by up to 60%, providing accurate and real-time KPI tracking through Tableau. By leveraging AI-powered workflows, the client was able to reduce costs and shorten timelines, all while being able to scale to meet large volumes of content required for global regulatory approvals.

## THE RESULTS

After just six months of deploying the centralized solution, the client was able to drastically increase their translation efficiencies and reduce the burden on their project management teams. In the first six months, they saw a savings total of \$107,000 and an overall price per word reduction of 53%.

A year and a half into the centralization journey, the client was seeing an average of 50% TM savings per month, which resulted in a total savings of \$1M across 20M words translated. The AI-powered workflows and high TM leverage reduced cycle time for large NDAs by up to 70%.
